dried apples

yellow millet, red millet, black millet, bare-grained oats

dried carrots

green foxtail

camomile flowers

If you want to transfer your pet on a new more healthy and nutritious food, it is necessary to follow certain rules. The new product smells differently. It differs in taste and it looks differently. Even the best content of the best amount of the nutritious ingredients may be considered unpleasant to the pet. Here are the recommendations of the veterinarians and the experienced ornamental birds' and rodents' breeders. They will help you to properly make your pet accustomed to the new food.

RECOMMENDATION 1

Add the newly - introduced food to the old one in small portions, gradually increasing the amount of newly – introduced food and decreasing the amount of the old one.

RECOMMENDATION 2

During the first few days, the amount of newly – introduced food in the offered mixture should be very little, that is, only 2-3 grams, for the pets to taste. On the third or fourth days, $\frac{1}{4}$ of the usual food can be replaced with the newly – introduced one. On the fifth or sixth day, you can mix the newly – introduced food and the old one in the proportion of 1/1. In several days, you should add to the newly – introduced food up to 25% of the old one. Approximately in a week, the pet will happily start eating the newly – introduced food. The pet will not feel any discomfort.

OFTEN ASKED: why not to offer the pet the newly – introduced food at once, because it is more tasty and more pleasant than the old one. The matter is, that your pet's digestion organs are ready to adjust to the assimilation of only certain products. They produce special enzymes. A sudden change of the diet may cause the digestion breakdown and the food will be poorly digested.

Transparent window

Possibility to assess the quality of treats before buying.

Compliance to the European standards. Stably high product quality and safety.

Care for health

Grinding of the teeth/beak.

Natural product

It does not contain the preservatives, flavorings, sugar..
